EXPOTRUSS®

X4K-22

Expotruss X4K-22 is a 4-point aluminium rigging frame made of 35mm supporting tube and 10mm thick connecting rods.

The Expotruss X4K-22 4-point aluminium rigging frame is an ideal and flexible element and can be used alone, or in combination with other X3K-22 and X2K-22 system elements.

This lightweight system is particularly suitable for smaller expo stands and shop frameworks. The conical connectors enable structures to be assembled and dismantled very quickly.

A broad range of top quality accessories facilitates extreme flexibility in applying this system. Specially manufactured rigging elements and curved sections can be delivered in almost all dimensions.

3D drawings are also available for planning support. The rigging elements can also be delivered with a special protective powder coating.
